

## PEDIATRIC EMERGENCY CARE 2

The course is intended to provide training for multi-disciplinary healthcare professionals in the early recognition of the child in respiratory or circulatory failure and the development of the knowledge and core skills required to prevent further deterioration towards respiratory or cardiorespiratory arrest.

### Who is this course suitable for?

The course is designed for healthcare professionals who would be expected to apply the skills taught as part of their clinical duties, or to teach them on a regular basis. Appropriate participants include doctors, nurses and paramedics working in direct contact with children. All applicants must hold a current clinical appointment and professional healthcare qualification. Medical students in their final year of training can be accepted as candidates.

### Learning outcomes

Undertaking the course should enable you to:

- use the structured ABCDE approach for rapid assessment of the seriously ill child;
- manage the sick child until the arrival of expert assistance;
- facilitate the development of resuscitation team members and team leaders;
- use a structured approach to communication amongst team members during an emergency situation

### The course objectives include:

- pediatric resuscitation,
- use the structured ABCDE approach,
- anaphylaxis,
- intoxication,
- dyspnea,
- laryngitis,
- airway management,
- Emergency Pediatric Dosing (Pediatric Tape),
- intravenous access,
- intraosseous access.

### Course structure

The course is run over one day.

Price: 150,00 EUR.

The course program consists of lectures, workshops, skill stations and teaching simulations.
